

- Good wear resistance.
- Suitable for fully automatic installation
- High temperature resistance in case of suitable compound selection.
- Excellent media resistance in case of suitable compound selection.

Because of their special profile, the profile AM wiper rings prevent the penetration of dust, dirt, grains of sand and metal swarf. Scoring is avoided to a great extent. Therefore sliding surfaces will be protected, the service life of the seals will be extended.

Oversized diameters ensure a tight fit when assembled and prevent the penetration of foreign particles at the outer diameter of the wiper. The profile AM wiper rings will provide a neat closure at the cylinder; no special screwings or holding plates are required.

Range of Application

Hydraulic and pneumatic cylinders, valve lifters etc.

Working temperature

-35 °C to +100 °C

Pneumatics

-35 °C to +80 °C

Surface speed

≤ 2 m/s

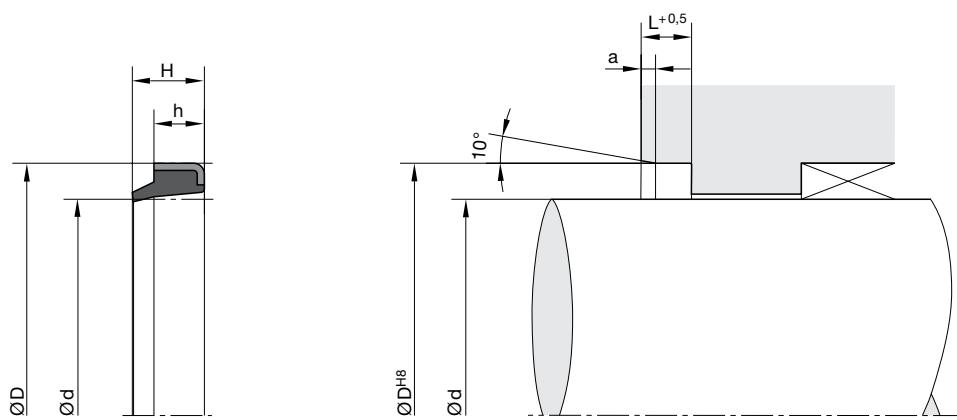

Compounds

Standard compound for the rubber part of the wiper is a NBR elastomer with a hardness of approx. 90 Shore A (Z5053). Additionally, a large number of dimensions is also available with FKM elastomer (Z5066).

Installation

The profile AM wiper rings are manufactured with a slightly oversized outer diameter D, thus ensuring a secure press fit in the groove D^{H8} after installation. Any contact of the wiper lip with piston rod eyes or other connecting parts should be avoided.

In case of special operating conditions (specific pressure loads, temperature, speed, use in water, HFA, HFB fluids etc.), please contact our consultancy service for a selection of the material and design best suited for your particular application requirements.

For surface finish, lead in chamfer and other installation dimensions see "General installation guidelines".
